G. Dry foam cleaning procedure

1. Feed enough shampoo onto the brush so the forward and return pass of the machine show a full width of foam.
2. Starting at the wall furthest from the door, move along the wall at a slow, constant pace.
3. Reverse the machine alongside the first pass, overlapping about 1/4 the width of the machine.
 - a. This is to eliminate streaking.
4. To speed drying time, pick up any excess foam with the wet/dry vacuum.
5. Use damp towel to get into corners and around baseboard areas.
6. If furniture is to be replaced before the carpet is dry, use protective pads under the legs.
7. After carpet is dry, vacuum thoroughly.
